Human multitasking is an apparent human ability to perform more than one task, or activity, at the same time. An example of multitasking is taking phone calls while typing an email and reading a book. Multitasking can result in time wasted due to human context switching and apparently causing more errors due to insufficient attention. If one becomes proficient at two tasks it is possible to ...

Electronic communication is emotionally gratifying, but how do such technological distractions impact academic learning? The current study observed 263 middle school, high school and university students studying for 15 min in their homes. Observers noted technologies present and computer windows open in the learning environment prior to studying plus a minute-by-minute assessment of on-task ...

It's a myth that we only use ten percent of our brains (leaving ninety percent of potential genius untapped), and it is also not accurate to say that people are either left- (logical) or right- (creative) brain dominant. So, your goal when studying is really to make the most of the brainpower you have available.

There are at least twelve distinct hypotheses as to how and why bipedalism evolved in humans, and also some debate as to when. Bipedalism evolved well before the large human brain or the development of stone tools. Bipedal specializations are found in Australopithecus fossils from 4.2-3.9 million years ago, although Sahelanthropus may have walked on two legs as early as seven million years ago.
