Life habit. The order has a worldwide distribution, but most species are found in the tropics. These tropic species vary from stick like species to those resembling bark, leaves and even moss or lichen. The stick insect can sometimes reach over 13 inches (33 cm) long. The longest is Chan's megastick.. A few species, such as Carausius morosus, are even able to change their pigmentation to match ...

Stick insect - Simple English Wikipedia, the free encyclopedia

Butterfly adults are characterized by their four scale-covered wings, which give the Lepidoptera their name (Ancient Greek λεπίς lepís, scale + πτερόν pterón, wing). These scales give butterfly wings their colour: they are pigmented with melanins that give them blacks and browns, as well as uric acid derivatives and flavones that give them yellows, but many of the blues, greens ...
