The skeleton is the body part that forms the supporting structure of an organism. It can also be seen as the bony frame work of the body which provides support, shape and protection to the soft tissues and delicate organs in animals. There are several different skeletal types: the exoskeleton, which is the stable outer shell of an organism, the endoskeleton, which forms the support structure ...

### **Skeleton - Wikipedia**

The Cambrian explosion or Cambrian radiation was an event approximately in the Cambrian period when most major animal phyla appeared in the fossil record. It lasted for about 13 –25 million years and resulted in the divergence of most modern metazoan phyla. The event was accompanied by major diversification of other organisms. Before the Cambrian explosion, most organisms were simple ...
