Conceptual Physics: Electromagnetism and Electromagnets Units. An electromagnet works on the principle that an electric current not only allows electrons to flow in a circuit, but also generates a small magnetic field. When a wire carrying electricity is coiled, the magnetic field becomes even stronger.

The Electromagnetic Spectrum. The electromagnetic spectrum is an ordered list of all the types of electromagnetic radiation. All electromagnetic radiation can be described using the wave model or particle model above. The only difference between each type is the wavelength and frequency of the associated electromagnetic wave.

- Electromagnetic waves move at the speed of light—no matter what the frequency or wavelength or intensity of the radiation.
- In an electromagnetic wave, the changing electric field induces a magnetic field. The changing magnetic field acts back to induce an electric field.
