### **Genomes And Their Evolution Answer**

20. A good summary of several processes involved in genomic evolution can be found in the globin gene families. Label and explain these processes as described in Figure 21.13.

Genomes fuses the fresh outlook of the new genomics with the traditional approach to gene expression to provide an up-to-date understanding of the role of the genome as the blueprint for life. This integrated approach focuses on the topics that are central to molecular genetics to create a teaching resource for modern molecular biology.

Differences between Norway rats and house mice. Norway rats and house mice belong to different species. A species is a group of related individuals or populations which are potentially capable of interbreeding and producing fertile offspring. So Norway rats and house mice belong to different species and cannot interbreed. Humans and orangutans, chipmunks and red squirrels, bottlenosed dolphins ...

The genetic history of Europe since the Upper Paleolithic is inseparable from that of wider Western Eurasia. By about 50,000 years ago (50 ka) a basal West Eurasian lineage had emerged (alongside a separate East Asian lineage) out of the undifferentiated "non-African" lineage of 70 ka. The basal Western Eurasians were early exposed to significant Neanderthal admixture.

Handling a High Fat Meaty Diet. Through their genomic comparisons, the researchers found clues to explain how today's cats, obligate carnivores, thrive on a diet typically so high in fat that a human consuming it would be at great risk for coronary heart disease. They discovered the genetic

differences that make dogs more reliant on smells for hunting and cats, on sound.

The evolution of sexual reproduction describes how sexually reproducing animals, plants, fungi and protists could have evolved from a common ancestor that was a single celled eukaryotic species. There are a few species which have secondarily lost the ability to reproduce sexually, such as Bdelloidea, and some plants and animals that routinely reproduce asexually (by apomixis and ...

2 Sober and Wilson (1998) note that there is a gap in their model of cultural evolution: "We can say that functionless [relative to human individual and group fitness] behavior should be more common in humans than other species, but we cannot explain why a particular functionless behavior has evolved in a particular culture.
