Biology is often approached on the basis of levels that deal with fundamental units of life. At the level of molecular biology, for example, life is regarded as a manifestation of chemical and energy transformations that occur among the many chemical constituents that compose an organism. As a result of the development of increasingly powerful and precise laboratory instruments and techniques ...

Genetics is a branch of biology concerned with the study of genes, genetic variation, and heredity in organisms.. Gregor Mendel, a scientist and Augustinian friar, discovered genetics in the late 19th-century.Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to offspring. He observed that organisms (pea plants) inherit traits by way of discrete "units ...

HER2 is short for the human epidermal growth factor receptor 2. (It is also known as ERBB2). In some cancers, especially breast cancer or cancers of the stomach and esophagus (gastroesophageal), the tumor cells have extra copies of the gene and excess amounts of the protein that it produces. Tumors in this category are known as HER2-positive and can be more aggressive and respond differently ...
