There are two basic viewpoints to this: (1) kinetic theory such as the Boltzmann kinetic gas theory and (2) statistical physics based on the Gibbsian concept of ensembles. (1) The kinetic theory is based on statistical time evolution of a macroscopic system using the so- called Master equations.

Physics 112, Thermodynamics and Statistical Mechanics. Place: Social Sciences 2, Room 075 Time: Tuesdays and Thursdays, 10:00-11:45. Book: The recommended book for the course is Thermal Physics by Kittel and Kroemer. This is actually the second edition. The first edition, which I slightly prefer, is just by Kittel.

statistical mechanics...with emphasis on the "statistical," and least-possible reference to the "mechanics." While the mechanical details change from system to system, the statistical digestion of those details is system-independent, and it is that fact that accounts for the compelling universality of thermodynamics.

18 CHAPTER 1. FOUNDATION OF STATISTICAL MECHANICS. and hence the entropy of the total system is. $S = S_A + S_B$ (1.60) which shows that for two systems in thermal equilibrium the entropy of the total system is equal to the sum of the entropies of subsystems. Hence the entropy is an extensive quantity.

I used Kittel's Thermal Physics for my undergraduate statistical mechanics course. I remembered that I had difficulties grasping the main ideas at that time. I can certainly understand the so-so reviews as this book has its good and bad.

Thermal Physics (2nd Edition): Charles Kittel, Herbert ...

Here, Kittel actually comes out and says this really isn't statistical mechanics per se, but physics student need to see it somewhere. This book should not be the first time you have seen the majority of this material.

PRINCIPLES OF STATISTICAL MECHANICS The earth-moon system. In this system, the mechanical parameters are the mass of the earth, the mass of the moon, and (because the earth and moon interact gravitationally), the gravitational constant G . The dynamical variables are the position and velocity (or momentum) of each body.
