Primate Evolution Lab (5.03) by d s on Prezi

Best Answer: Primates are remarkably recent animals. Most species of living things had become extinct long before the first monkeys and their prosimian ancestors evolved. While the Earth is about 4.55 billion years old and the first life dates to at least 3.5 billion years ago, the first primates did not appear until around 60 million years ago.

Diet and Primate Evolution Many characteristics of modern primates, including our own species, derive from an early ancestor's practice of taking most of its food from the tropical canopy by Katharine Milton KATHARINE MILTON is professor of anthropology at the University of California, Berkeley. After earning her doctor-

Diet and Primate Evolution - Biology Junction

Evolution of Primates. The first primate-like mammals are referred to as proto-primates. They were roughly similar to squirrels and tree shrews in size and appearance. The existing fossil evidence (mostly from North Africa) is very fragmented. These proto-primates remain largely mysterious creatures until more fossil evidence becomes available.
